

# The California Hydrogen Highway Network

## Integrated Presentation and Overview

Public Meeting

November 3, 2004

Michael D. Jackson

Jonathan H. Leonard

Erin A.R. Kassoy

***TIAX LLC***

## Reminders:

Questions and comments can be submitted during this session:

**Webcast viewers:** email to [onair@arb.ca.gov](mailto:onair@arb.ca.gov)

**Live Attendees:** fill out and submit form

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# California Hydrogen Highway Network: Core Values and Objectives

- Promote energy independence
- Enhance energy security & diversity
- Reduce air pollution
- Reduce global warming emissions
- Protect public health
- Promote economic competitiveness
- Create jobs and business opportunities

**Note: for detailed background and mission statements:  
<http://hydrogenhighway.ca.gov/>**

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

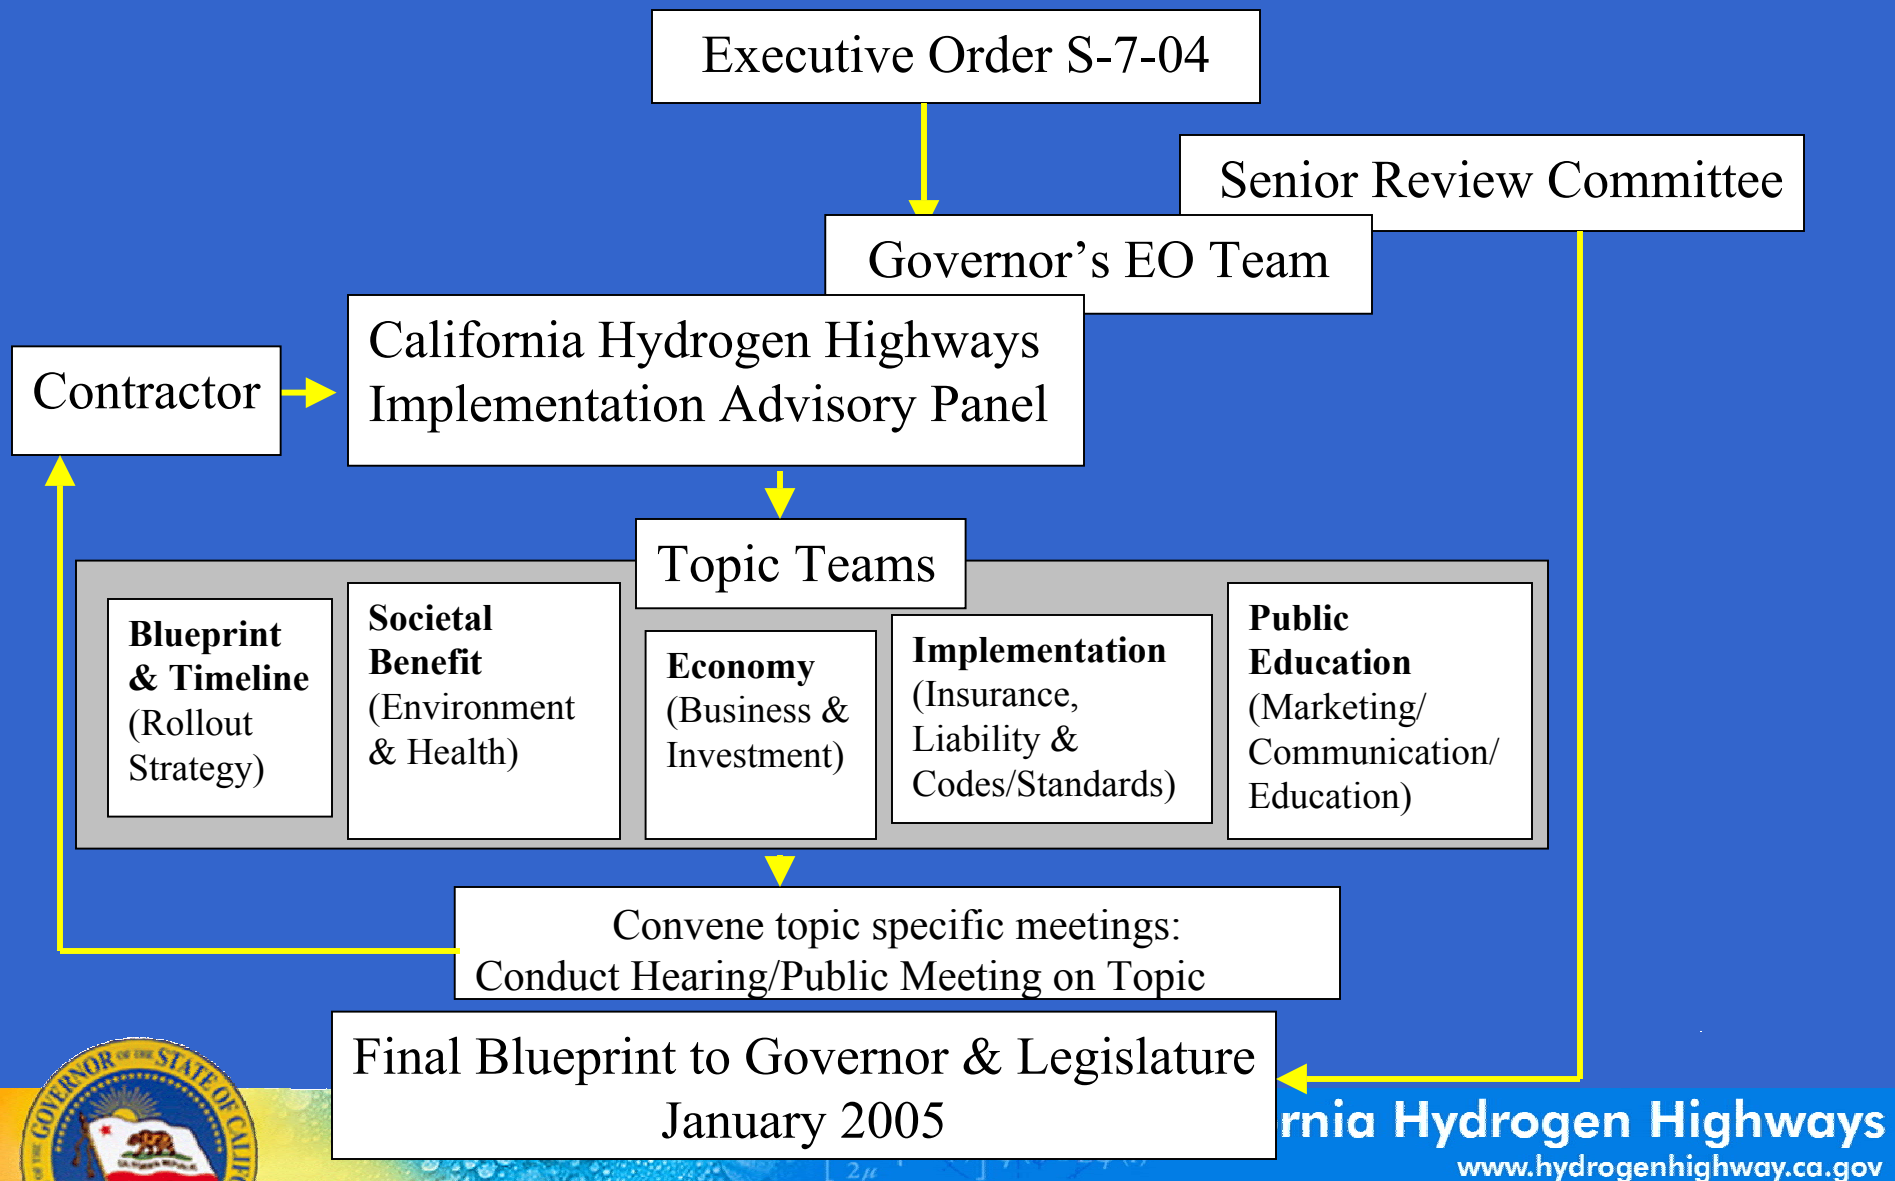

# Measurements of Success

- Access to hydrogen fuel
- Significant and increasing percentage of renewable hydrogen
- Balance of commercialization pathways
- Public education program for hydrogen
- Commercially viable hydrogen vehicles & hydrogen-powered devices
- Hydrogen codes, standards, emergency response programs, training
- Ongoing research and development efforts
- New jobs and businesses

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Operational Diagram

# Interactions Among Teams

# Summary: Overall Progress and Status

- Including today's earlier meeting, the Implementation Advisory Panel has now met five times.
- Each of the five Topic Teams has:
  - Conducted a public workshop.
  - Presented detailed findings to the Panel, and sought guidance on key issues.
  - Prepared a draft report, which is undergoing internal review.
- Final drafts of the Topic Team reports will be submitted to the EO Team on Nov. 5, 2004. These reports will be woven into a final, integrated "Blueprint Plan" report.
- A draft of the Blueprint Plan will be submitted to the Panel and Senior Review Committee on 12/01/04. The final version will be submitted to the Governor and Legislature by Jan. 1, '05.

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Final Report Outline (Preliminary)

## Volume I - Executive Summary

## Volume II - California's 2010 Hydrogen Highway Network

### Summary Blueprint Plan (Recommendations)

- Introduction
- Collaborative Process
- State of Hydrogen Technologies
- Benefits of Hydrogen
- Implementation Logistics and Issues
- Scenario Analyses
- Hydrogen Highway Implementation
- Public Policy Needed to Achieve Plan
- Public Education and Outreach

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

**California Hydrogen Highways**

# Final Report Preliminary Outline (cont'd)

## Volume III - Appendices

**Appendix A.** Marketing, Communication and Education (Public Education Topic Team)

**Appendix B.** Codes and Standards, Insurance and Liability (Implementation Topic Team)

**Appendix C.** Societal Benefits of Hydrogen (Societal Benefits Topic Team)

**Appendix D.** Economics of Hydrogen (Economy Topic Team)

**Appendix E.** Blueprint Rollout Strategy (Blueprint Topic Team)

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

**California Hydrogen Highways**

[www.hydrogenhighway.ca.gov](http://www.hydrogenhighway.ca.gov)

## Progress Update on Topic Teams:

- 1) Blueprint Team
- 2) Societal Benefits Team
- 3) Implementation Team
- 4) Economy Team
- 5) Public Education Team

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

## Progress Update on Topic Teams:

- 1) **Blueprint Team**
- 2) Societal Benefits Team
- 3) Implementation Team
- 4) Economy Team
- 5) Public Education Team

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Blueprint Team Goals

- Develop a plan that includes cost estimates, a timeline, and priorities to address how to develop and grow the California Hydrogen Highway Network
- Accelerate the commercialization of hydrogen in California as a fuel for vehicle and power-generation technologies
- Help build on California's lead in hydrogen and fuel cell technologies with a multi-phased approach towards sustainable commercialization

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Blueprint Team: Subgroups

- Production and Delivery - availability, commercial readiness, barriers, environmental considerations, etc. for various options
- Applications - vehicles, stationary fuel cells and energy stations
- Sites - station locations, relation to existing facilities and end users, access to renewable energy, etc.
- Commercialization - customer pull, technology push

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Blueprint Team: Summary of Progress

- Each of the four sub-groups are now completing their respective sections of the draft report
- The Production and Delivery Subgroup is evaluating various hydrogen production options, including those involving renewable energy sources
- The Applications Subgroup is reviewing, cataloging and analyzing potential hydrogen-powered applications (mobile and stationary) over three different timeframes
- The Sites Subgroup is establishing detailed hydrogen station selection and siting criteria, and developing illustrative station maps under each of three CA Hydrogen Highway scenarios (A, B and C)
- The Commercialization Subgroup is identifying various “customer pull” and “technology push” activities and policies that will help accelerate commercialization
- Progress in these sub-group areas was presented to the Advisory Panel at today’s meeting

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Sites Subgroup

- Establishing Siting Criteria
  - Leveraging off existing resources (CNG, DG, site characteristics)
- Developing illustrative maps for bounding exercise
- Three scenarios:
  - 50 stations
  - 150 stations
  - 250 station
- Maps are non-specific on technology and capacity; based solely on demographics

# Example Maps: Scenario A for Northern California

## Progress Update on Topic Teams:

- 1) Blueprint Team
- 2) Societal Benefits Team**
- 3) Implementation Team
- 4) Economy Team
- 5) Public Education Team

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Societal Benefits Team: Summary of Progress

- Developed hydrogen pathways and station mix estimates under Scenarios A, B and C
- Assessed the appropriate role of renewable energy sources, and how to achieve progressively higher percentages of renewables
- Established key goals
  - 30% reduction in aggregate well-to-tank green house gas (GHG) emissions
  - 20% of hydrogen produced from renewable energy sources

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Examples of Hydrogen Production Pathways

| Energy Carrier     | Central Plant Production            | Delivery      | On-Site Production | Compression Option | Consider Sequestration |
|--------------------|-------------------------------------|---------------|--------------------|--------------------|------------------------|
| Renewable Power    |                                     |               | Electrolysis       | 420 bar cascade    | --                     |
|                    | Electrolysis                        | Tube trailer  | --                 | 420 bar cascade    | --                     |
| Grid Power         |                                     |               | Electrolysis       | 420 bar cascade    | --                     |
| Natural gas        | Steam reforming, Existing LH2 plant | LH2 Truck     | --                 | 420 bar cascade    | --                     |
|                    | Steam reforming                     | Mobile fueler | --                 | 420 bar cascade    | yes                    |
|                    |                                     |               | Steam reforming    | 420 bar cascade    | --                     |
| Petroleum Coke     | Pyrolysis to H2                     | Mobile fueler | --                 | 420 bar cascade    | yes                    |
| Biomass (Ag waste) | Pyrolysis to H2                     | Mobile fueler | --                 | 420 bar cascade    | yes                    |

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

## Progress Update on Topic Teams:

- 1) Blueprint Team
- 2) Societal Benefits Team
- 3) Implementation Team**
- 4) Economy Team
- 5) Public Education Team

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Implementation Team: Summary of Progress

The Team has completed its draft report addressing a wide variety of related issues, e.g.:

- Collection of existing codes and standards regulating hydrogen use in California
- Identification of gaps, areas of overlap, or insufficiencies within the existing body of codes and standards
- Potential recommendations to the State to resolve inadequacies in existing codes, standards, permitting processes; and vehicle-station interface
- Issues pertaining to securing insurance for hydrogen facilities; and accepted methods of risk assessment and management

## Progress Update on Topic Teams:

- 1) Blueprint Team
- 2) Societal Benefits Team
- 3) Implementation Team
- 4) Economy Team**
- 5) Public Education Team

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Economy Team: Summary of Progress

- A detailed station cost model has been prepared, using established station mix scenarios
- Key assumptions are built into the model, as derived from Topic Team members and other stakeholders
- This model was used to estimate total costs for the CA Hydrogen Highway under each Scenario (A, B and C)
- Estimated costs for each scenario include:
  - Annual (amortized) station costs (capital, O&M in MM\$/yr)
  - Hydrogen vehicle costs (\$/vehicle)
  - Hydrogen fuel price (\$/kg)

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Economy Team Progress (continued)

- “Scenarios for success” have been envisioned, and sensitivity analyses have been performed, to help leverage existing resources and identify pathways to the most-favorable economics
- Estimated results on an annualized cost basis as well as Capital, Operating, \$/kg:
  - Scenario C baseline results are \$34 MM/yr
  - Site selection, station choice, and other parameters result in \$29 MM /yr +/- \$5 MM range
- Economic externalities (e.g., the cost of adverse health effects from today’s petroleum-based transportation sector) are also being estimated, in conjunction with the Societal Benefits Team
- These preliminary results were presented to the Advisory Panel at today’s meeting, and will undergo further review / revisions

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# The Economy Team is Looking at Options to Fund the Hydrogen Highway Network

- Private Funding: the private sector / industry will use its own capital to build hydrogen stations and related infrastructure.
- Public Funding: any method of funding that affects the revenues earmarked for the State budget.
- A combination (public-private partnership) of the two.

# Examples of Public Funding Options

- Cross Subsidies, e.g.:
  - Redirect a small share of excise fuel tax
  - Redirect a share of CPUC “Public-Purpose” surcharge (allow utilities to spend the funds on transportation projects)
  - Use a share of AB2766 funding
- New Subsidies, e.g.:
  - Issue general obligation bonds (used to finance public capital projects)
  - Revenue bonds (may not be possible, because they require revenue streams)
  - Increase vehicle registration fee
  - Establish hydrogen grant program (similar to Moyer)
  - Provide tax credits to reduce costs of R&D investments

## Progress Update on Topic Teams:

- 1) Blueprint Team
- 2) Societal Benefits Team
- 3) Implementation Team
- 4) Economy Team
- 5) Public Education Team**

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

# Public Education Team: Summary of Progress

- Defined overarching goals
- Described core message
- Defined a detailed communications process
- Established immediate communication needs
- Identified target audiences and sub-audiences
  - Technology and industry enablers
  - Government, policy makers and influencers
  - Consumers and customers
  - Education community
- Developed detailed outreach recommendations for each targeted audience

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

**California Hydrogen Highways**

[www.hydrogenhighway.ca.gov](http://www.hydrogenhighway.ca.gov)

# Public Ed. Team's Overarching Goals

- Enhance and build upon State's reputation as a world leader in hydrogen technologies, alternative fuels and environmentally benign transportation technologies
- Foster widespread public understanding and support for hydrogen
- Foster policy support that can incentivize hydrogen technology manufacturing
- Develop programs and mechanisms for training of the needed workforce
- Create consumer demand for hydrogen fuel and end-use devices (vehicles, stationary fuel cells, other)

$$\left[ \frac{p^2}{2\mu} + V(r) \right] \psi(r) = E \psi(r)$$

**California Hydrogen Highways**

[www.hydrogenhighway.ca.gov](http://www.hydrogenhighway.ca.gov)

Public input, questions  
and comments  
are welcome!
